

BackupAssist™ is the world's first backup software solution that addresses the specific needs of small businesses. With the right mixture of value, features and functionality, it enables small businesses to set up a reliable backup strategy in minutes, and enjoy the reassurance of secure data protection.

1. Easy to set up, and use. Save time, avoid frustration.

The Configuration Wizard (shown on the right) makes it easy to install and use (see below). And after the initial setup, there's no extra maintenance that you have to do! It's truly hassle free so you don't waste time writing and testing batch scripts.

2. Implement a reliable strategy “out of the box”

BackupAssist Configuration Wizard

Welcome to the BackupAssist Configuration Wizard

This wizard helps you configure BackupAssist.

You'll be able to setup the major settings such as your operating system, backup of external, and automatic media.

The settings you make in this wizard can also be changed at a later date in the Administration Console.

You may also like to refer to the BackupAssist Quick Start Guide, which is downloadable from the BackupAssist website.

Quick Start Guide

BackupAssist

Back Next > Exit

BackupAssist™ implements your choice of media rotation scheme, at the click of a button! You enjoy the security and reliability without going through the learning curve.

3. Monitor the backup process so you're in control

Just like a second hand parachute, conventional scripts and scheduled tasks leave businesses vulnerable. You simply don't know that a backup has failed in the past until you try to restore — and by then it's too late!

BackupAssist™ overcomes this by monitoring and verifying the backup process, and emailing the backup result logs to your administrator. This gives you back control and confidence so if a backup fails, you're informed and can take appropriate action.

4. Simple instructions so you can't go wrong!

Of course, a backup strategy is only worthwhile if it's followed. BackupAssist™ ensures this by emailing simple instructions to your office administrator or secretary. When action is required (usually daily), an email is sent, clearly stating which tape or disc to put in the drive.

This minimizes the possibility of human error, so you know with confidence that your data is protected.

5. Integrates with Microsoft's Windows Backup Facilities

Because BackupAssist employs Microsoft's backup technology, you can be confident in quality of the backups. This core technology comes standard with Windows, so your backups can be restored on any Windows machine, even if BackupAssist is not installed there! And you are not locked into the proprietary formats of other software vendors.

6. Priced competitively

As a bonus, because we use the existing infrastructure provided in Windows, we're not re-engineering the wheel. We pass this benefit onto you in the form of cost savings. BackupAssist™ is priced very competitively in the marketplace, meaning that you save money without sacrificing quality.

7. Available for download today!

Best of all, BackupAssist™ is available for an immediate purchase or trial. During this time, you can:

- See how easy BackupAssist™ is to use and set up
- Let your office administrator manage the backups, and delegate that responsibility with confidence
- Monitor the results of your backups with no extra effort!

If you're new to backups, this resource is for you. We've created an online education centre with easy to understand information and video demonstrations to get you started quickly.

To take advantage of all these benefits, visit our website at www.BackupAssist.com and download your free 30 day trial. You'll experience the peace of mind that comes with knowing that your data is safe.

Technical specifications at a glance...

1. CD / DVD support provided by packet writing software bundled with CD / DVD drive
 2. SQL Server backup provided by optional add-on module
 3. Refer to the Open Files White Paper for more details (available from www.BackupAssist.com)

What does the rest of the world say about BackupAssist?

We needed a system that not only was foolproof – we had to be able to “set it; and, forget it.” It also had to send us a message when it backed up successfully or when it did not back up successfully. It had to have the ability to tell us what files were giving problems on backup. And – as an added treat, it had to remind us to “put in the tape.” Your product delivered “in spades.”

Fabulous product, excellent price, good followup.

Graham A. Wells – Graham Wells Law Firm – Canada

We have a number of smaller clients that have only one or maybe two servers. We, nor they, could justify the cost of software like [competitor's product] for there organization. BackupAssist has all we need for these types of clients and the tape rotation system is a breeze to configure.

David Bonorchis, indigoIT LLC, Virginia, USA

We are a small (and growing!) business using SBS 2000 to manage our file services and exchange email. Having spent some considerable hours setting up automated backups etc a few months earlier, I know how unnecessarily painful this process can be. When I had to do it for the 2nd time I looked for an alternative and Backup Assist was my choice. Backup Assist takes all of that pain away and sorts out the MS Exchange open files problem in a few simple steps. Excellent.

Martin Beake, 2Sys Ltd, UK

I purchased BackupAssist because it is so easy to use and it simply works! What appealed to me most was its ability to backup SQL server. I think BackupAssist is a great product. Keep up your good work!

Minh Tran, Hummingbird Australia Pty. Ltd., Australia

This software is extremely good value money, with features that you would pay hundreds of dollars for if you were to purchase on of the so called “big players”. The User Interface is VERY User Friendly and it is a matter of set it and forget it (well almost you still need to check the logs). Thanks for a well designed product, and I have already started to tell others about it.

Craig McInnes, Equip - Whangarei City Elim Church Trust, New Zealand

BackupAssist makes Windows Backup a useful programme. We use it on the servers of our “smaller” clients. Its user interface is intuitive and without “show elements”.

Werner Schmuck, Gutenberg Rechenzentrum, Germany

The greatest strength is without doubt the easiness of implementing a working backup schedule. Combined with the email capability it provides everything I need for our business' backups at a very competitive price level!

Johan Sandqvist, AB Gyllenhammar & Sahlin, Sweden.

We were looking at implementing a backup rotation system prior to purchasing your software. [BackupAssist is] absolutely user friendly and easy to understand... Excellent Utility.

Berdj Boyadjian, Bankers Assurance s.a.l., Lebanon

A very useful software, simple, reliable and inexpensive. Top class support and kind people. A must for every sysadmin struggling with NTBackup. Seamless tape rotation, automatic interface with Removable Storage

Elena Barbera, Venus Promotions srl, Italy

Simplicity is the keyword. We had tried [competitor's product] which had a far too big overhead on our resources. Very easy to understand and user friendly.

Hans Ceelen, DA&A Driessen, The Netherlands

BackupAssist is easy to use. Quick setup of windows backup. Price - Quality: excellent.

Pascal Balduzzi, Compupal, Belgium

We have been running Backup Assist consistently for almost 2 months now. I have to say that I am very pleased with the product itself in particular its good design features and layout.

John Greene, TIC-Jamaica, Jamaica

Easy-to-use, excellent mailer and scheduler.

Sasha Slavin, ESI - Expert Solutions International, Israel

User friendly, not expensive backup solution comparing to others sophisticated and more expensive. It's fit for purpose for small organizations.

Tomasz Kiepek, Texaco Lubricants Polska, Poland

It's very easy to use. Other solutions were too expensive with almost same capabilities.

Gerardo Arlotto, CUCP S.A., Uruguay
