

MultiSite Manager & the Centralized Monitoring Console

Backup reporting is a critical part of the backup process. **BackupAssist's Centralized Monitoring Console (CMC)** provides customers with an important tool to help manage their backup reports. CMC allows administrators to view backup reports in a single interface and receive backup reports by email.

BackupAssist MultiSite Manager introduces an alternative backup reporting solution. MultiSite Manager remotely manages BackupAssist v8 computers over the internet. MultiSite Manager can also display backup reports in a web application and send out backup reports and notifications by email.

Centralized Monitoring Console

- ❖ A cloud based service.
- ❖ A centralized reporting solution for BackupAssist computers.
- ❖ Information is stored on Cortex IT hardware.

MultiSite Manager

- ❖ A software based solution.
- ❖ A remote management and reporting solution for BackupAssist computers.
- ❖ Information is stored on a user-controlled server of their choice at any location.
